FLUSHFIX®

a new patented fastening solution

NEW

Assembly costs cut by

2/3

Replace an unattractive and high process cost solution

BY

a quick, aesthetic and easy to fit new fastening solution !

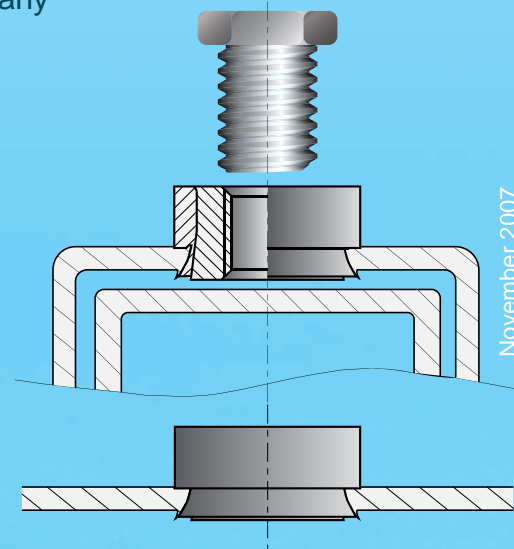

FLUSHFIX® is the solution for a virtually flush internal thread on the internal wall of a tube or on one metal sheet when a flush finish is necessary on the opposite side to crimping.

FLUSHFIX® allows a sliding movement of 2 tubes one inside the other.

FLUSHFIX® installation is completed without welding, so eliminating any rework operation.

Main advantages :

- FLUSHFIX® is a blind rivet nut that is flush on the opposite side to crimp
- High resistance & aesthetic assembly and without any welding operation
- Simple high speed assembly, no special skills required
- 100% correct location of the thread in the tube guaranteed at the crimping operation
- Eliminate retapping of threads (to remove weld spots or paint excess)
- Eliminate grinding and polishing operations
- Can be used on painted tubes

November 2007

Product range :

From M4 to M10 steel / stainless steel
for wall thickness : 1 / 1,5 / 2 / 2,5 / 3 mm
